

*A talk for students in the framework of
the SingularityU Chile Summit*

15 March, Las Condes Cultural Corporation Auditorium

The SingularityU Chile Summit, an innovation and technology convention organized by Singularity University from Silicon Valley, and BeSTinnovation, brought together fifteen world-class experts to share their knowledge, connections and inspiration with local leaders regarding the impact of corporate disruption, exponential technologies and digital transformation for business, education, public policies and quality of life, thus driving a positive change in Latin America.

“Singularity University Summit provides a critical and optimistic view as to how to rethink local and global challenges for our society in the fields of education, health, environment and production development. Our objective is not just to transmit questions and ideas, but also to encourage the audience and decision-makers to become a part of this transformation if possible and that value and wealth can be generated and can impact society by using exponential technologies for social mobility.” said Bárbara Silva.

In the framework of this important technological event, Singularity University hosted a talk similar to the main event at the Las Condes Cultural Corporation auditorium. This time the focus was on students from municipal schools in Las Condes district, who listened attentively to these international technology leaders.

MundoChile provided simultaneous interpreting services in English and Spanish for this talk focused on students.
