Training Workshops
SAP – LATAM

February 2022

SAP is one of the world's leading producers of software for business process management, and develops solutions that facilitate the efficient processing of data and the flow of information between organizations.

As such, SAP establishes strategic alliances with large companies and corporations so that the implementation of its IT solutions are as customized as possible, in a process of training the employees and executives who will be involved in the management and handling of these systems.

From November 2021 to February 2022, SAP conducted a series of training workshops for LATAM Airlines, with experts sharing their knowledge in English, and which were translated in real time by our interpreters through a digital platform. This allowed all participants, regardless of the language they were speaking, to share information, doubts and comments with the support of remote simultaneous interpretation provided by our company MundoChile Ltd.
